OUTDOOR EDUCATION

GROUNDS DEVELOPMENT STRATEGY

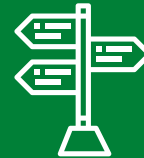

Support learning beyond the classroom with bespoke development strategies for your outdoor spaces.

Following a primary consultation, Field Studies Ireland will assess your grounds and identify ways to enhance your outdoor spaces, providing staff and students with a stimulating learning environment.

We'll create a development strategy that includes a mapped plan and vision for each area, detailing the associated actions required to carry out this strategy.

FIELD
STUDIES
IRELAND

PLAN

We will supply you with a map that highlights areas for development within your grounds

VISION

We will create a vision for each new area of development, outlining its new purpose and application

ACTION

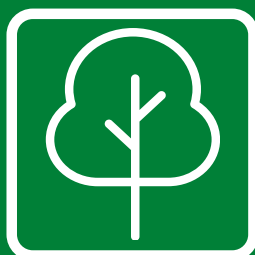

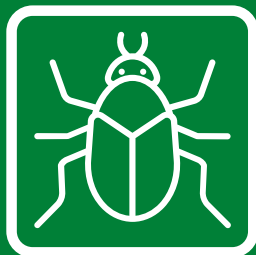

We will create a list of actions to help you to turn these spaces into their new purpose

BioBlitz

A Site-Specific Biodiversity Survey

Empowering Place-Based Learning

A BioBlitz is a teaching aid, which can be used to support the creation of purposeful lessons or signage, encourage a connection with nature, and establish a sense of place with the natural surroundings.

This begins with a detailed survey of your grounds, identifying the most common species present, typically including: trees, bugs, plants, birds, mammals, etc. We then present the data in a digital report, complimented by some educational information on each individual species.

LESSON PLANS

We provide lesson plans to help you take learning outdoors.

Generic Lesson Plans

We have created a suite of 28 outdoor lesson plans suitable for all ages.

These are seen as a quick win, and provide a tangible resource to empower you to take learning outside.

Bespoke Lesson Plans

We design these specifically for your organisation, in line with your programmes, and suitable for your learners.

We first understand what you want to deliver, and then create outdoor lessons that align with your existing and future programmes.
